## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-15 and 25-29, drawn to an apparatus for orienting a crystal, classified in class 378, subclass 79.
  - II. Claims 16-24, drawn to a diffractometry method, classified in class 378, subclass 71.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the apparatus can be used to orient a crystal for other than for the determination of initial alignment.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
4. During a telephone conversation with Mr. Guy Gosnell on August 6, 2003 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-15 and 25-29. Affirmation of this election must be made by applicant in

Art Unit: 2859

replying to this Office action. Claims 16-24 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

### ***Drawings***

6. The drawings are objected to because rectangular boxes 18 and 20 in Fig. 1, 4 and 7 should be labeled in accordance with 37 CFR 1.83. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claims 1-15 and 25-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Coleman P.N. 2,585,916.

Coleman discloses a jig for orienting a crystal for x-ray diffractometry. Applicant's attention is directed to Fig. 1-3 and corresponding description. A first member in the

Art Unit: 2859

form of plate 200 supports a frame relative to a source of radiation. A second member in the form of locking arm 211 is movably connected to plate 200. Carried by the second member or locking arm 211 is an engagement member in the form of shoe 210. Shoe 210 engages the crystalline body mounted on disk 210 to define a predetermined angle of incidence for the x-rays. Note the presence of indicia in Fig. 1 and 5.

Coleman meets all the limitations of the claims at issue in their present form. Note for example how shoe 210 ("the engagement member") is threadably connected i.e. screw 212, to locking arm 211 ("second member"). Note the angle of arm 211.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Howe '259 and Speed disclose crystal holders. Note the abstract of each disclosure.
